PROFESSIONAL EXPERIENCE

Computer Science Engineering student with hands-on experience in Machine Learning, Cybersecurity, and Full-Stack Development. Proven ability to design and deploy real-time AI-driven systems, including phishing detection, intelligent web scraping, and interactive holographic interfaces. Skilled in building scalable applications with optimized performance and high accuracy.

EDUCATION

- | | |
|--|--------------------------|
| • B.E. Computer Science and Engineering | CGPA: 8.5 2023-Present |
| • PUC Shree Vani Pre-University College | 91.16% 2020-2023 |
| • SSLC Sri Devraj URS International Residential School | 80.02% 2020 |

PROJECTS

- **AI-driven web scraping for sustainable insights and decision making on e-commerce**
 - Developed an intelligent web scraping system using Python and Selenium for adaptive data extraction across dynamic websites
 - Integrated AI-based data processing and NLP query handling for intelligent scraping automation
 - Implemented captcha handling, proxy rotation, and real-time analytics dashboard
 - Achieved 92% accuracy in extracting and predicting product data from multiple e-commerce platforms
- **Real Time AI/ML Quishing and Smishing Detection and prevention system** | [GitHub Link](#)
 - Built a mobile-based cybersecurity application to detect QR-based phishing (quishing) and SMS phishing (smishing) attacks
 - Designed and implemented logistic regression ML model for real-time threat detection
 - Enabled background SMS monitoring and automated threat prevention system
 - Improved user security through real-time alerting and attack mitigation mechanisms
- **Virtual Holographic Interaction System** | [GitHub Link](#)
 - Designed an AI-powered holographic system integrating Computer Vision, NLP, and 3D visualization
 - Trained custom ML models on 1000+ gesture samples and multi-speaker voice datasets
 - Built real-time pipeline using OpenCV, Three.js, and Flask for gesture and voice interaction
 - Implemented Pepper's Ghost projection for immersive holographic display
 - Achieved 93% interaction accuracy with low-latency performance
- **Crypto Investment Dashboard** | [GitHub Link](#)
 - Developed a full-stack web dashboard for tracking cryptocurrency investments
 - Integrated real-time crypto price APIs for dynamic data updates
 - Built secure backend with user authentication and PostgreSQL database integration
 - Designed responsive UI using Bootstrap and JavaScript

TECHNICAL SKILLS

- **Programming Languages** - Python, C, HTML, CSS, JavaScript
- **Technologies/Frameworks** - Bootstrap, Nmap, Nessus, Wireshark, Git & GitHub, Kali Linux, Express, Selenium, PostgreSQL.
